

FASTBACK for the Macintosh — Release 1.02 Update Notes

This package contains release 1.02 of Fastback for the Macintosh. Below is a list of the major changes and enhancements incorporated into this release:

- Improved Error Handling

During a backup, if FASTBACK encounters a bad disk, it will eject that disk and prompt you for a new one. When the new disk is inserted, the backup will continue.

During a restore, if FASTBACK can't restore a file (even after using Error Correction Codes), it will allow you to either TRY AGAIN or SKIP the bad file and continue.

- File and Folder Attributes Restored

FASTBACK now restores a folder's location, size, and view information as well as each file's location within a folder during a full restore.

- Document Launch Improved

FASTBACK now restores information to allow documents to find their applications after a restore.

- DeskTop File Not Copied

During a backup or restore, FASTBACK has been modified to ALWAYS skip the DeskTop file automatically — rather than requiring users to exclude the file, as suggested in the documentation.

- MultiFinder

MultiFinder has not been available long enough to allow sufficient testing for us to recommend its use with FASTBACK. Although in most cases FASTBACK will work with MultiFinder, as a general rule backup programs should not be run with other programs or desk accessories. The other programs may access the data being copied or have a dramatic affect on FASTBACK's timing and performance. In addition, MultiFinder does not allow FASTBACK to utilize the new feature which restores the document launch information, and so should not be used when applications are being restored. For these reasons, the Finder is recommended for use with FASTBACK backups and restores.

- Compatibility with FASTBACK Release 1.01

FASTBACK is completely compatible with backup sets produced with Release 1.01, so you can begin to use it immediately with your current disks. This update release is governed by the terms of the License Agreement delivered with the original program.

- Apple "TeachText" Application

TeachText is a copyrighted program of Apple Computer, Inc. licensed to TouchStone Software Corporation to distribute for use only in combination with FASTBACK for the Macintosh. Apple software shall not be copied onto another diskette (except for archival purposes) or into memory unless as part of the execution of FASTBACK for the Macintosh. When FASTBACK has completed execution, Apple software shall not be used by any other programs.

Apple Computer, Inc. makes no warranties, either express or implied, regarding the enclosed computer software package, its merchantability or its fitness for any particular purpose. The exclusion of implied warranties is not permitted by some states. The above exclusion may not apply to you. This warranty provides you with some specific legal rights. There may be other rights that you may have which vary from state to state.
